In recognition of ACME Telepower Limited’s innovative, eco-friendly products, services and initiatives, GSMA has shortlisted the nomination of the company for the “Green Mobile Award for Best Green Product/Service or Performance”. The 'Green Mobile Award’ highlights the role of mobile in the development of low carbon economies, industries and lifestyles through improved energy efficiency, alternative energy sources, recycling, conservation, travel, manufacturing and logistics cost reduction and eco-friendly consumption. All winners will be presented during the GSMA Global Mobile Awards Ceremony at the Mobile World Congress in Barcelona, on February 15.

Expressing his delight at the short-listing, 2011, Sandeep Sethi, CEO, ACME Telepower Limited said, “We feel deeply honored that our green solutions have been so well-recognized at such a prestigious forum. I am positive that this will set an example for many other companies in telecom, power as well as other sectors to switch to green and environment-friendly products and services. ACME has been at the forefront to make the green approach profitable and I am especially proud as this is realization of our corporate vision and mission.”

“Our congratulations go to all the nominees in this year’s Global Mobile Awards,” said Rob Conway, CEO of the GSMA. “To get down to just 115 nominees across 10 categories, from more than 470 high calibre entries, certainly presented our judges with a tough challenge this year. It is a great achievement to be shortlisted among such a high quality field of entrants and we eagerly anticipate the announcement of the winners on Tuesday 15th February 2011 at the Mobile World Congress and look forward to showcasing another great year of innovation for the mobile industry.”

ACME Group is making strides into newer technology areas that have the capability to fuel the country’s growth in times to come. There has been a deliberate focus on commercializing technologies for environment-friendly and efficient energy generation systems like Solar Thermal for megawatt class power generation, as part of the company’s green approach initiative.
