

Reliance Industries Limited-owned Infotel Broadband has shortlisted three vendors for supplying its optical network transmission gear worth \$500 million, say news reports.

It has shortlisted Infinera Corporation, Ciena Communications and Alcatel-Lucent for supplying the telecom equipment.

Infotel Broadband is investing in transmission gear based on dense wave division multiplexing (DWDM) technology to enhance bandwidth capacity of its high-speed wireless broadband networks.

The selected vendors will be responsible for handling system design, supply, installation, commissioning and integration of DWDM equipment.
