

Tata Communications has roped in Neeco Global ICT Services as one of its customers.

As part of this arrangement, Tata Communications will help Neeco to market and deliver Internet of Things (IoT) services for enterprises in Europe. Further, Neeco will leverage the Tata Communications MOVE platform to offer integrated IoT services to its customers, enabling them to deploy IoT connected devices anywhere in the world.

Neeco has developed a unique set of IoT products and services aimed at global telecom providers, IoT technology vendors, enterprises, and government organisations. These include Trexee, a GPS and GSM tracking solution that offers a complete set of capabilities – including location, acceleration, temperature and vibration – for different sectors such as transport & logistics, waste management construction, agriculture, leasing companies and rental companies.

The Tata Communications MOVE platform enables enterprises to transform how they operate and engage with their customers by capturing, moving and managing information seamlessly and securely worldwide. This platform is underpinned by Tata Communications' relationships with more than 600 mobile network operators worldwide, and its global network, which connects 4 out of 5 mobile subscribers.

“We are delighted that Tata Communications has chosen to work with Neeco to help accelerate IoT adoption in Europe. We are constantly working on new IoT products that bring additional benefits, reliability and efficiency into various market segments. The IoT is still very much a developing field, with many competing technologies. We feel that this puts Neeco at an advantage because we are able to help design, deliver and maintain IoT devices for our customers as the IoT field continues to evolve,” says David Pátek, founder and CEO of Neeco Global ICT Services.
